

GYTS Outdoor Optical Cable

structure:

Description:

GYTS is the outdoor fiber optic cable type used for duct and aerial applications. The loose tube stranding technology make the fibers have good secondary excess length.

Features:

- Up to 144 fiber cores.
- The loose tube stranding technology make the fibers have good secondary excess length
- Metal strength member provides excellent strain performance..
- Corrugated steel tape armored and PE outer sheath providing property crush resistance and gun shot resistance features.
- The fibers free movement in the tube, which keeps the fiber stress-free while the cable is subjected to longitudinal stress.

Application:

- Stallation in aerial or duct environment for long haul communication.
- LAN, especially suitable for the situation of high requirements to lateral pressure resistance.
